## No Risk Mini PACS Service

NCD Medical Corporation (NCD) provides a simple, no risk solution to manage and archive medical information. The solution is a web based ASP Mini-PACS and Patient Information service, called e-WIX (electronic-Worldwide Information Exchange).

This unique service allows medical facilities the ability to have instant electronic access to DICOM studies and medical records without a large upfront investment in equipment, personnel, and training. The model includes NCD providing a gateway storage server residing at the medical facility to capture DICOM data from each modality. This server will store and manage the data, provide local workstation access and transfer this data to e-WIX hosting facilities. Once at the e-WIX hosting center, typically within minutes, the data is made available for remote access. The images are then available as lossless or lossy compressed image data. Images are also maintained in archives at separate hosting locations.

Pay only a small monthly fee based upon the number of workstations that require access and the amount of electronic storage used. The e-WIX service represents a low cost alternative solution to PACS, a short term interim solution to PACS, or a way to cost effectively archive your PACS data.

NCD provides the total solution for PACS, document imaging, film archiving, and disaster recovery. Our services are HIPAA compliant and FDA approved. Visit [www.ncdmedical.com](http://www.ncdmedical.com) for a live demo.
